STUDY - DECK COMMAND CENTER

Your CFA decks, ready to build and study.

The Study tab now starts with the deck command center. Create a new deck, see what is due, and add cards to any topic without digging through multiple secondary screens.

Implementation Notes

- Preserve the deck-first Study workspace and reduce screen clutter.
- Show only up to three deck cards on the default surface.
- Make deck creation, studying a deck, and adding cards easy from this screen.
- Keep tabs: Study, Concept Map, Readiness, Sync.
- Preserve the premium pearl/turquoise liquid glass UI and avoid stock Anki / AnkiDroid styling.
- Do not add source-node concepts: `Open source node` , `FRA source node` , or `source node` .

Acceptance Bar

Production must match `source.html` visually as closely as platform constraints allow.

Desktop and Android must preserve the same concept, hierarchy, typography feel, colors, spacing, and interaction model. Intentional deviations require documented rationale and approval.
