

Readiness - Exam Risk Console

Frozen at 2026-07-05 17:35:33 from `.lavish/readiness-screen.html`. This packet preserves the approved readiness concept for pixel-faithful desktop and Android implementation.

Production Contract

- Preserve the premium pearl/turquoise liquid glass UI and restrained exam-risk console hierarchy.
- Keep Memory, Performance, and Readiness as separate score ranges, never one blended number.
- Support honest abstain/no-score states when evidence is thin.
- Show local evidence: graded reviews, first exposures, coverage, topic weight, reviewed coverage, graded evidence, recall ranges, weak/uncovered flags.
- Keep the Forgetting Watchlist and Pull retention queue action as core readiness functionality.
- Scores must work offline and with AI off; AI may explain but not be required.

Desktop Screenshot

READINESS - EXAM RISK CONSOLE

Are you ready to pass?

Pass call: borderline positive, 66-72 projected readiness range. This is a local evidence model, not validated against real CFA exam data; when evidence is thin, the product must abstain instead of inventing confidence.

Run readiness drill

Open latest mock review

1,284
graded reviews

96
first exposures

8/10
topics covered

THREE SEPARATE SCORES
No blended number.

Memory, performance, and readiness stay separate so the learner can see whether the risk is recall decay, exam execution, or projected pass confidence.

Memory

74-80

Scheduled recall durability and predicted forgetting risk.

Performance

61-67

Graded vignettes and new-question execution under exam pressure.

Readiness

66-72

Projected pass readiness range from coverage, memory, and graded evidence.

Abstain rule

No score

If graded evidence or topic coverage is thin, show the missing reason instead of a fake number.

Strong: Ethics, Equity

Uncovered: Derivatives, Alternatives

Works offline, AI off

Scores are computed by the local engine from stored reviews, first exposures, graded answers, and topic coverage. AI can explain the result, but must not be required to produce it.

MAJOR RISK DRIVERS

The 3 issues most likely to change the result

Exam-weighted

FRA recall decay

Consolidation and lease adjustments fade after 6 days; missed refreshes are dragging a heavy topic below the pass buffer.

High risk

Ethics accuracy volatility

Overall score is strong, but Standards VI-VII still swing on near-miss wording and professional-conduct traps.

Volatile

Quant formulas under timed pressure

Regression and time-series recall is acceptable untimed, then drops when the vignette compresses setup time.

Speed gap

TOPIC READINESS

Coverage and recall evidence

82% exam covered

Topic evidence must expose weight, reviewed coverage, graded proof, and recall range so high-weight gaps are visible before the learner trusts the readiness call.

TOPIC	WEIGHT	REVIEWED / GRADED	RECALL RANGE	RANGE
Ethics	10-15%	94% / 182		81-87
Equity Valuation	10-15%	88% / 164		72-80
Portfolio Management	10-15%	81% / 119		66-74
Fixed Income	10-15%	76% / 103		59-69
Quant Methods	5-10%	71% / 96		56-66
Financial Reporting	10-15%	71% / 141		66-74
